display**

**Supports Dual-band
Wi-Fi and 4G
Connectivity**

**Mobile terminal
device**

Ingenico DX8000

The DX8000 is targeted at merchants who want to take payments flexibly using a mobile device with a reliable battery life. This device is ideal for merchants who want to operate under a Dual Band Wi-Fi connection and provide durable 4G connectivity when taking payments across multiple indoor and outdoor locations.

Developed on an Android 10 UI, the Ingenico DX8000 meets the very latest PCI PTS v6.0 security standards and provide a flexible transaction processing solution.

The large touchscreen display and Contactless reader simplify the payment process.

The Ingenico DX8000 offers an Android core, an updated user interface but the same simplicity at its core like existing Ingenico estate terminals.

This also helps to make the setup process simple and fallback mid-transition reliable. The easy Menu, Home and Back Android navigation improves the usability allowing businesses to accept all forms of card and electronic payment and generate printed receipts to provide transparency to your customers.
